

Nashville Walk

100%

of donations go to
PKD research to help
bring treatments to
patients faster.

A cure is our finish line

The Walk for PKD is your chance to take a small step and make a big difference in the lives of those who have polycystic kidney disease (PKD).

River Park

1100 Knox Valley Drive, Brentwood, TN 37027

What is PKD?

- > Polycystic kidney disease (PKD) is a chronic, genetic disease, causing uncontrolled growth of fluid-filled cysts in the kidneys often leading to kidney failure. It affects all gender, racial and ethnic groups equally.
- > A typical kidney is the size of a

human fist and weighs about a third of a pound. Polycystic kidneys can be much larger, growing as large as a football.

- > There are two types of PKD. Both are genetic: autosomal dominant (ADPKD) and autosomal recessive (ARPKD).

- > There is no cure, but the PKD Foundation is dedicated to finding treatments and a cure for PKD.
- > Our vision is to #endPKD.
